

Handlers

This directory contains the handlers for various events and form submissions within the Anwar Sales Ecosystem.

Handler Files

Each handler file is responsible for managing the logic for a specific entity or process. The primary handlers include:

- **MainHandler.js**: The main entry point for the application. It routes incoming requests and events to the appropriate handlers based on the form ID or sheet name.
- **BDLeadHandler.js**: Handles form submissions and edits for BD Leads.
- **EngineerHandler.js**: Manages form submissions and edits for Engineers.
- **PotentialSiteHandler.js**: Processes form submissions and edits for Potential Sites.
- **RetailerHandler.js**: Handles form submissions and edits for Retailers.
- **CRMHandler.js**: Manages CRM-related functionalities.
- **SiteUpdateHandler.js**: Handles updates related to sites.
- **VisitHandler.js**: Manages visit-related data and processes.

These handlers contain the core business logic for their respective modules, including data validation, processing, and interaction with the database service.
